

**12-2 Frequency and Histograms**

The following numbers represent the number of minutes different people spent on the internet in a day:

→ 78, 38, 48, 120, 88, 48, 52, 13, 41, 62, 19, 50, 51, 27  
 (13), 19, 27, 38, 41, 43, 48, 50, 51, 52, 62, 75, 85, (120)

$$\frac{120-13}{4} = \frac{107}{4} = 26.75 \rightarrow 27$$

a. Make a frequency table to represent the data. Use 4 classes.

Class	Frequency
13-39	4
40-66	7
67-93	2
94-120	1

b. Draw a histogram to represent the data. Be sure to label everything clearly!

# Minutes on Internet in a Day
